Foreword	vii
Preface	xi
CHAPTER 1. The Structure of Science: Logic of Accepting	
Hypotheses	1
Introduction	1
Problems in Science	2
How Hypotheses Are Formulated	4
How Hypotheses are Accepted	5
Paradigm—a Protective Mechanism in Science	9
Mathematization of Knowledge as an Example of Constructing a New Paradigm	16
How Science Grows	19
Is the Probabilistic Evaluation of Hypotheses Possible?	22
What is Science?	25
How Can the Epistemological Role in Discoveries Be Estimated?	26
Some Historical Parallels and the Principal Consequence of Popper's Concept of the Growth of Knowledge	28
A Metaobserver's Glance at Science	33
CHAPTER 2. Scientific Creativity as a Manifestation of Intellectual Rebellion: A Bayesian Approach to the Problem	35
CHAPTER 3. Mathematics as a Language of Science: Using Mathematics to Describe the External World	43
Introduction: Formulation of the Problem	43
Axiomatic-Deductive Construction of Traditional Mathematics: Logical Structures of Pure Mathematics	44
Limitations Imposed on Deductive Forms of Thinking by Gödel's Theorem	49

Mosaic Structures of the System of Judgments in Applied Mathematics	53
Applied Mathematics as a Language: The Role of Sense Content Underlying the System of Signs	64
Language of Mathematics as a Metalanguage: Mathematical Structures as Grammar of This Metalanguage	70
Variety of “Dialects” of the Metalanguage of Mathematics	73
Polysemy of the Language of Mathematics	75
Mathematical Model as a Question to Nature Asked by a Researcher	77
Peculiarities of Teaching Applied Mathematics	82
Concluding Remarks	83
CHAPTER 4. Why Do We Use Probabilistic Concepts to Describe the World?	85
Introduction	85
Criticism by T. R. Fine and V. N. Tutubalin	86
History of Determinism	90
History of the Teaching of Chance	95
Formation of a Probabilistic Paradigm	103
Ontology of Chance	116
Concluding Remarks	122
CHAPTER 5. The Distribution Function of Probabilities as a Way to Determine Fuzzy Sets: Sketches for a Metatheory (A Dialogue with Zadeh).	125
Introduction	125
The Distribution of Possibilities	126
Randomness as a Synonym of Fuzziness	128
Fuzziness of Language Semantics	129
Extraparametric (Qualitative) Analysis of the Probabilistic Distribution Function	131
Concluding Remarks	135
CHAPTER 6. On Some Parallels Between the Bohr Complementarity Principle and the Metaphoric Structure of Ordinary Language	139
CHAPTER 7. Science and the Biosphere: An Attempt at a Comparative Study of the Two Systems	145
Introduction	145
The Emergence of Systems	146
Informationally Developing Systems Should Have Their Own Mechanism to Overcome Gödel’s Difficulties	148
A Model with a Chance Generator	148

The Language of Science and the Biosphere, Two Self-Organizing Systems	150
Interaction with External Information	152
Exponential and Logistic Growth: Creation of Favorable Ecological Situations	153
Fecundation as a Process of Information Interaction	153
Communities in the Biosphere and in Science	154
The System's Freeing of Itself from Outdated Carriers of Information	155
The System of Restrictions That Stabilize Development	156
The Single Wave of Evolution	164
The Teleological Nature of a System	164
A Glance at the Future	165
CHAPTER 8. The Problem of Complexity in Describing the World Scientifically: A Formal Analysis of Difficulties in Constructing Theoretical Biology	
Psychological Grounds for Judging Whether a Statement Is True	167
Compactness of Theoretical Constructions in Physics	172
Is a Compact Description of Knowledge Possible in Biology?	174
The Role of Computers in Efforts to Describe the World Scientifically	183
Concluding Remarks: Dialectics of Reduction and Expansion of Knowledge in the Development of Science	196
CHAPTER 9. The Penetration of the Humanities into Other Fields of Knowledge: Reflection on the Ways in Which Science Develops	
Penetration of the Humanities into Scientific Disciplines	199
Cybernetic Nature of Science	207
"Humanization" of Education	209
The Need for Staff Educated in the Humanities	210
Resistance to the "Humanization" of Knowledge	211
Concluding Remarks	212
CHAPTER 10. Is a Scientific Approach to the Eschatological Problem Possible? A Logical Analysis of the Problem of Global Ecology	
Introduction	215
Logical Analysis of the Problem of Forecasting	216
Comparative Study of Cultures as a Way to Understanding the Peculiarities of Our Behavior	221

Dullness as an Index of the Quality of Culture	224
Probabilistic Model of Social Behavior	225
The Role of Science in the Evolving Ecological Crisis	233
Concluding Remarks	234
CHAPTER 11. Geographic Distribution of Scientific Information	237
Introduction	237
The Stocking of the Library of Odessa University with Scientific Journals	238
Distribution of Foreign Scientific Journals Among Separate Scientific Centers of the Soviet Union	242
Distribution of the Journals <i>Biometrika</i> , <i>Technometrics</i> , and <i>Lancet</i> Among the Countries of the World	252
World Distribution of <i>Science Citation Index</i>	258
Concluding Remarks	258
CHAPTER 12. On the Stock Exchange of Science: Changing Demand for Intellectuals	261
Introduction	261
Analysis of Employment Advertisements in <i>Nature</i> and <i>New Scientist and Science Journal</i>	264
Analysis of Employment Advertisements in the <i>Times</i> of London	269
Concluding Remarks	270
CHAPTER 13. Instead of a Conclusion	271
References	279
Index of Names	289
Index of Subjects	293
